Lanna plywood E1 is a high quality furniture grade plywood selected from special materials that make it suitable for furniture and interior works, We use large logs for our plywood production as they bend and shrink less, but more flexible compare to smaller logs.

Our plywood materials are imported from Europe and USA for varieties of grades in order to meet customer requirements in quality and price

Lanna Marine Plywood

Is made of kerning with phenolic glue with E1 of a European formaldehyde emission standard. This glue has good absorbing and adhesive properties that strengthen the plywood and is also health and environmental friendly. It is suitable for exterior work that requires weatherproof e.g. shipbuilding industry. It is also working well in humid areas e.g. toilet and kitchen.
